* NOTE: All tablet prices are based on 84 days, except for FIPMed 90 days. All prices are in USD.

	Tablet dosage is incorrectly following injection dosage, which is not sufficient due to loss during digestion, absorption and metabolism. Please refer to chart A & B below.
	Recommended TABLET dose from Dr Niels Pedersen, taking into consideration of the 60% loss, to match the exact dose of injections.
RED TEXTS	Need to take 5-10 tablets because they only have 1kg and 2kg denomination. FIPMed makes custom-sized tablets so it's easier for cats.
	Information is extracted from Curefip's website. Please note that the dose is the same for 4kg and 5kg and does not regard the type of FIP. This is unusual because Ocular and Neurological FIP doses should be double that of Wet or Dry FIP. EIDD2801 are usually sold in capsule form and has high mutagenic toxicity (will cause cancer later on in the cats)
	Information is extracted from FIPOasis and FIPtreatment website, both associated with FIP Warriors.
	All these brands' bottle sizes (number of ml) were not mentioned in the website, but it is deduced by the total number of vials needed for 84 days from the FIP Oasis website.
	Bova is usually sold around \$60-\$90 per tablet of 50mg from vet clinics. You cannot get the medicine directly from Bova. This price is estimated from \$60 per tablet (lower end). Bova prices were converted from UK pound. Bova is only available in 50mg tablets and is difficult to cut for 4kg cats and 3kg cats.
	All FIPMed tablets contain more GS441524 to compensate for loss in digestion and metabolism. Eg. 3kg cat tablets contains 45mg of GS441524 instead of 18mg by others. Price is for 90 days (for extra in case of drops or need to extend treatment for a while more). FIPMed tablets and dosage are the only ones formulated based on recommendations from Dr Niels Pedersen. Not the cheapest but reasonable price with most accurate and sufficient dosage. All the other brands' dosage are incorrect. Also come with a free 154-page comprehensive ebook on FIP, treatment and care protocol.

Chart A: Dosage for Injections

Wet / Dry FIP	6mg/kg
Ocular FIP	8mg/kg
Neuro FIP	10mg/kg

Chart B: Dosage for Tablets

FIP Type	Tablet Actual GS441524 Content	After 60% loss from digestion and metabolism*
Wet / Dry FIP	15mg/kg	6mg/kg
Ocular / Neuro FIP	30mg/kg	12mg/kg

* Oral administration was also found to provide blood levels, but somewhat delayed and only at about 40% peak levels of subcutaneous and intravenous routes. GS-441524 is absorbed from the intestine with about 50% efficiency as subcutaneous or intravenous administration. Given the absorption limitations of oral GS-441524, one would expect the oral dosage to be around twice that of injections. (Niels Pedersen NC, 2018).
